Current Electricity Sector Threat Alert Levels: <u>Physical</u>: HIGH, <u>Cyber</u>: ELEVATED Scale: LOW, GUARDED, ELEVATED, HIGH, SEVERE [Source: ISAC for the Electricity Sector (ES-ISAC) – <a href="http://esisac.com">http://esisac.com</a>]

1. December 21, San Francisco Chronicle — Blackout puts San Francisco in the dark. A massive power outage hit San Francisco, CA, on Saturday, December 20 — disrupting traffic, shutting down two transit stations and disorienting thousands of suburbanites who visit the city only a few times a year for holiday shopping. The outage began at a major PG&E substation at Eighth and Mission streets shortly before 6 p.m. after a fire broke out on the second floor. When firefighters arrived, they found two transformers smoldering and thick smoke filling the building. Ron Low, spokesperson for PG&E, said 120,000 customers — about a third of the town — lost power during the height of the blackout. He added that it was unclear what caused the fire in the substation, a kind of mothership to other substations that serve the city. The substation is a plain, windowless three—story building filled with transformers. It takes high—voltage electricity that comes up on underground lines from the Peninsula and then sends it out to smaller substations and customers. "This substation plays

a significant role in our power system," Moreno said. The fire broke out on the second floor and the system automatically shut down. Officials say full power should be restored by late Sunday, December 21.

- 2. December 19, Reuters LNG expansion offers hope and challenges to energy market. As aging U.S. gas fields struggle to meet the ravenous demand of gas—fired power plants, calls to increase imports of liquefied natural gas (LNG) are growing despite a potential \$100 billion price tag. The Bush administration recently met with about two dozen energy ministers, including some from OPEC member countries, to discuss the future of LNG, a condensed, flammable natural gas. LNG now makes up about two percent of U.S. gas use, but some analysts believe it could rise to 20 percent by 2020. However, experts say the cost of constructing new LNG import facilities and safety issues may hold off quick development. An LNG project, from producing the gas to building a regasification terminal, can run up to \$10 billion, and there are risks of investing in developing countries bedded with natural gas but plagued by social instability. Nations trying to attract LNG investment must cut red—tape, make tax policies predictable, and have systems that enforce contracts. Source: http://biz.yahoo.com/rc/031219/energy\_lng\_1.html
- 3. December 19, Reuters NRC tells FirstEnergy Ohio nuke needs more work. Inspectors from the U.S. Nuclear Regulatory Commission (NRC) told FirstEnergy Corp. at a meeting Friday, December 19, that more work needs to be done on the Davis–Besse nuclear power station before they are ready to recommend restarting the troubled facility. FirstEnergy spokesperson Todd Schneider said the company will have to address certain "safety culture" issues raised by the NRC, to be discussed at a meeting scheduled for December 29. The 925 megawatt Davis–Besse plant, at Oak Harbor, OH, was shut for extensive repairs in February 2002 when it was discovered that boric acid had eaten nearly all the way through the reactor vessel's carbon steel lid in several places. "Safety culture at the plant has improved overall ... but in last survey, taken in November, there were some departments that showed a decline," Schneider said, referring to the latest concerns raised by the NRC panel and plant inspectors assigned to review the Davis–Besse repair program. "The focus of the meeting will be on operations and the plant's safety culture," he added. Source: <a href="http://biz.yahoo.com/rc/031219/utilities\_firstenergy\_davisbe.sse\_2.html">http://biz.yahoo.com/rc/031219/utilities\_firstenergy\_davisbe.sse\_2.html</a>

## **Chemical Sector**

4. December 18, The Greeneville Sun (TN) — More state, federal agencies join clean-up effort at Tennessee site. Despite freezing temperatures, efforts to clean-up a toxic chemical spill along Interstate 81 in western Greene County continued on Wednesday at a heightened pace. Greeneville-Greene County Emergency Management Agency Director Bill Brown said authorities were working as quickly as possible to complete the clean-up in a safe manner, and to determine if two affected creeks and several wells along Democrat Road were safe. When a Greeneville Sun reporter and photographer visited the clean-up scene Wednesday afternoon, the number of agencies and workers involved in the clean-up effort appeared to have almost doubled since the day before. The area near the intersection of Westwood and Democrat roads

as well as two creeks that flow from that area became contaminated as the result of a fiery Interstate 81 collision early Sunday morning. In the collision, a northbound tractor—trailer carrying the hazardous chemical pyrocatechol burned following a collision with a car that was traveling south in the northbound lanes of I—81. The collision occurred on an I—81 bridge above Westwood Road, and chemical residue from the truck apparently leaked from the bridge onto an embankment below, and migrated beneath Westwood Road and into nearby Red Run Creek.

## **Defense Industrial Base Sector**

5. December 18, Reuters — Marines returning to Iraq seek high—tech equipment. The requests coming into the Marine Corps Warfighting Laboratory, a special unit that identifies or develops new technology for battlefield uses, for tiny unmanned surveillance planes, dust—controlling chemicals and troop—tracking systems by the U.S. First Marine Expeditionary Force before their second excursion to Iraq. The queries started appearing after reports that Iraqis opposed to the U.S. occupation have stuffed toy cars, Coke cans and animal carcasses with explosives and remotely detonated them when troops passed. Also high on the list is technology to track individual fighters. "One of the problems they've had is that they've lost track of people when they've been evacuated (for medical care)," said Jim Lasswell, who helps develop or procure technology to fulfill requests that come to the lab in Quantico, VA. "They want to know where they're going and how they're doing." The DragonEye unmanned reconnaissance plane has been singled out as one of the most popular new technologies used in Iraq, and troops are begging for more. The 5—pound, battery—powered plane is small enough to be carried in a backpack, and can be assembled and launched within 10 minutes.

## **Banking and Finance Sector**

6. December 19, SecurityFocus — Chats led to Acxiom hacker bust. A Cincinnati, OH, man who plead guilty Thursday, December 18, to cracking and cloning giant consumer databases was only caught because he helped out a friend in the hacker community.

Daniel Baas, 25, plead guilty Thursday to a single federal felony count of "exceeding authorized access" to a protected computer for using a cracked password to penetrate the systems of Arkansas—based Acxiom Corporation. The company analyzes in—house consumer databases for a variety of companies. Information cataloged by Acxiom includes consumer's Social Security numbers, dates of birth, gender, income, occupation, number of children, years at residence, adults in household, and vehicle information. However, company spokesperson Dale Ingram says the vast majority of the records Baas downloaded consisted of less—sensitive subsets of information, like a consumer's name and address.

During Baas' work for a contractor to Acxiom, he had legitimate access to an Acxiom FTP server. At some point, while poking around on that server, he found an unprotected file containing encrypted passwords and downloaded "millions" of consumer records, says prosecutor Robert Behlen. "He didn't execute any fraud with them," says Behlen. Acxiom never detected Baas' activity. Authorities found Baas through an Internet Relay Chat (IRC). # **Transportation Sector**

7. December 19, Associated Press — Federal grant to increase cruise ship security. Juneau, AK, is receiving \$94,000 in federal money to help prevent terrorist attacks on cruise ships, the port director said. The money from the U.S. Department of Homeland Security will be used to build a barrier in the open sides of the downtown parking garage to prevent someone from jumping through to the dock, said Port Director John Stone. The security measure may also ward off smuggling. Stone envisions the barrier being a screen that would allow light, require low maintenance and be aesthetically pleasing. The \$94,000 is one element among a broad set of measures Juneau has taken to prevent terrorist attacks on cruise ships, Stone said. Stone expects to receive the money in early 2004, at which time the Docks and Harbors Board can appropriate the money. The barrier is scheduled to be in place next fall. The money is part of \$758,569 in grants to provide for more secure ports in the state, said U.S. Rep.Don Young, an Alaska Republican, in a statement. He said the money provides resources for security planning and projects to improving dockside and perimeter security vital to securing national seaports.

- 8. December 19, PrimeZone Media Network LAX expects 2.6 million passengers during holidays. Los Angeles International Airport (LAX) officials are estimating 2.6 million holiday travelers will pass through the airport between Friday, December 19 through Sunday, January 4. The daily average of this year's passenger traffic is expected to be the same as last year's. However it remains nine percent lower than the record holiday travel recorded in late December 2000 and early January 2001. Airport officials noted airlines during this year's holiday period are continuing to fly reduced schedules, a practice that began after September 11, 2001. Passenger volume also is expected to be off about 2.8 percent from 2002, to finish 2003 with a total 54.6 million passengers. Heavy travel is expected on the weekend before December 25 and again on the weekend concluding January 4 as travelers stretch their holiday because January 1 falls in the middle of the week. All available airport police and traffic officers will be on duty. The Transportation Security Administration (TSA) has advised that its passenger and baggage screeners' work hours are established to handle the busy holiday period, including peak hours. The TSA and LAX officials said, "We expect everything to go smoothly just as it did during the Thanksgiving holiday period." Source: http://www.primezone.com/pages/news\_releases.mhtml?d=50122
- 9. December 19, Reuters (UK) Virgin Atlantic passengers back in Britain. Hundreds of Virgin Atlantic passengers have landed in Britain, 24 hours late after their pilot was charged with being drunk. Captain Richard Harwell, 55, was arrested on Friday just before he

was due to fly a Boeing 747–400 from Washington, DC's Dulles International Airport to London Heathrow, the airline said on Sunday. Flight VS 022 was cancelled and nearly 400 passengers were put up in hotels overnight before a replacement crew was brought in to take them to London. Barbara Davidson, from London, traveling with her 12–week–old son, Peter, praised security staff in Washington. "I just thought thank heavens he didn't fly us across the Atlantic," she said. "I was very grateful that the security people who stopped him did their jobs." A Virgin Atlantic Spokesman said the pilot was due to be arraigned at a court in the Washington, DC area on Monday. "He has been charged with attempting to operate an aircraft under the influence of alcohol and will face a judge tomorrow," the spokesman said. Virgin Atlantic said it has a strict no–alcohol policy and that it had launched an internal inquiry. "Everyone at Virgin Atlantic is shocked and surprised," the company said in a statement. "This is unprecedented."

10. December 18, Food Safety and Inspection Service — Chicken patties recalled. Tyson Foods Inc., a Vicksburg, MS, firm is voluntarily recalling approximately 19,900 pounds of fully cooked frozen grilled chicken patties that may contain pieces of metal, the U.S. Department of Agriculture's Food Safety and Inspection Service (FSIS) announced Thursday. The chicken patties were produced on September 25, 2003, and were sent to distributors in Ohio, California, Texas, Florida, Arkansas, and Indiana who in turn supply the product to school districts. The recall was initiated after FSIS learned of consumer complaints regarding this product. There have been no reports of injury related to this product. ## **Water Sector**

11. <u>December 18</u>, <u>Associated Press</u> — Federal officials sign off on San Diego water transfer. Federal officials signed the papers needed to begin the biggest transfer of water from

farms to cities in U.S. history, water representatives said Thursday. The U.S. Bureau of Reclamation has notified regional water officials that 3.2 million gallons of Colorado River water is being held in Lake Havasu, AZ, and is ready to be delivered to San Diego, CA. By month's end, the water should begin flowing into San Diego County, the first of a 75-year deal that will eventually provide the county with 90 billion gallons a year, roughly a third of its future water needs. The transfer of water from the Imperial Valley to fast-growing cities in Southern California was approved in October after years of bickering among California and six other states. Beyond serving burgeoning urban populations, the shift is designed to curb California's overreliance on the river. For San Diego, it means an end to decades of near total reliance on the Los Angeles-based Metropolitan Water Authority of Southern California, a massive urban water broker.

### **Public Health Sector**

12. December 19, New York Times — Flu widespread in 36 states. Influenza has become widespread in 12 more states in the last week, bringing the total to 36, with sporadic cases in the remaining states, the U.S. Centers for Disease Control and Prevention (CDC) said Thursday. But the outbreaks have not reached the level of an epidemic, the CDC said. Though many emergency rooms in the United States are filled with patients who suspect they have influenza, only about a third have it, the CDC said in its weekly report. Some reports, particularly from Western states that were hardest hit early in the season, focused on children becoming seriously ill from the flu. Previously healthy children developed severe brain inflammation or breathing difficulty, requiring support from mechanical respirators and treatment in intensive care. But "we truly do not know if this is a worse than usual influenza season in children," said Margaret B. Rennels, chair of the American Academy of Pediatrics Committee on Infectious Diseases. About 36 children have died from influenza or its complications, David Daigle, a CDC spokesman said. But, on average, 92 children die every year from influenza. Daigle said the CDC expected to send out epidemiologists around the country to study pediatric cases, and one element they want to study is whether other infections are joining with the flu virus to produce some of the more severe cases.

# **Government Sector**

13. December 21, Department of Homeland Security — Department of Homeland Security Secretary Tom Ridge announces raise in Threat Level to Code Orange. Secretary Ridge said in a press briefing on Sunday, December 21, "Today, The United States Government raised the national threat level from an Elevated to High risk of terrorist attack — or from Code Yellow to Code Orange. We know from experience that the increased security that is implemented when we raise the threat level, along with increased vigilance, can help disrupt

or deter terrorist attacks. The U.S. Intelligence Community has received a substantial increase in the volume of threat related intelligence reports. **These credible sources suggest the possibility of attacks against the homeland around the holiday season and beyond.**" He went on, "In addition to knowing that homeland security professionals at all levels are working to keep our communities safe, we ask individual Americans to do a few additional things during this time of heightened alert. I have said it before — and I am saying it again — homeland security begins at home. Never has that been more true. Your awareness and vigilance can help tremendously, so please use your common sense and report suspicious packages, vehicles, or activities to local law enforcement."

# **Emergency Services Sector**

- 14. December 19, Department of Homeland Security Summary conclusions from national exercise. The U. S. Department of Homeland Security (DHS) Friday, December 19, released summary conclusions from the exercise TOPOFF 2, the largest and most comprehensive terrorism response and homeland security exercise ever conducted in the United States. Very early in the Department's existence, TOPOFF 2 provided DHS with a substantive assessment of national response capability as well as recommendations for improvement. "Our Nation must always be ready to face a serious attack, and we must have confidence in our response capabilities," said Homeland Security Secretary Tom Ridge. "In the Department's second month, we tested our incident management capabilities and pushed the response envelope at the federal, state, and local level like in no exercise before." TOPOFF 2 was conducted from May 12 to May 16, 2003, and involved federal, state, local, and Canadian participants in a full-scale exercise that assessed how responders, leaders, and other authorities would react to the simulated release of weapons of mass destruction (WMD) in Seattle, WA and Chicago, IL. The exercise scenario depicted a fictitious, foreign terrorist organization that detonated a simulated radiological dispersal device (RDD or dirty bomb) in Seattle and released the pneumonic plague in several Chicago metropolitan area locations. Source: http://www.dhs.gov/dhspublic/display?content=2693
- 15. December 19, Firehouse.com Chicago firefighters respond to subway gas main break.

  More than 75 firefighters responded to a high-pressure leak in a gas line on the north side
  Friday morning, December 19. Crews capped the leaking gas line at 3425 N. Lakewood Ave.
  by 11:30 a.m. The leak, called in at 10:25 a.m., triggered a Hazmat response at Addison
  and Lakewood, on the north side. Residents were evacuated from the area as a
  precaution. Power to the Brown Line was shut down between Belmont Avenue and Addison
  Street, according to CTA spokeswoman Ibis Antongiorgi, but full service was restored by 11:30
  a.m. Responding firefighters called a Level 1 hazardous materials response, and the call was
  upgraded to a Level 2 and a still-and-box alarm at 10:30 a.m., Gault said. He said the
  still-and-box alarm was called to "bring in the manpower" and not because there had been any
  reports of fire. A spokesman for Peoples Energy said a city sewer crew working in the area hit
  the gas line.

Source: <a href="http://cms.firehouse.com/content/article/article.jsp?section.Id=46&id=23483">http://cms.firehouse.com/content/article/article.jsp?section.Id=46&id=23483</a>

16. December 19, The Straits Times (Singapore) — Civil defense beefs up anti-terror skills. The threat of terrorism has, in two years, given the Singapore Civil Defence Force (SCDF) a new look, as more officers are recruited, skills upgraded and special emergency strategies adopted. SCDF Commissioner James Tan, in an update on the force's activities, told The Straits Times that regular officers now number 2,000, with 10 per cent more junior officers and two per cent more senior officers. Every officer has also been trained to handle hazardous materials (Hazmat) and can conduct search—and—rescue operations in contaminated areas, said Tan, 56, who has headed the SCDF since 1992. Previously, only firefighters in the four Hazmat fire stations — Sengkang, Alexandra, Tuas and Jurong Island — were equipped to fully deal with hazardous materials. Among the new skills they have learned are basic decontamination and how to prevent leakages from spreading. Equipment such as suits and masks have also been procured for them, added Tan. The officers from the four Hazmat stations have meanwhile further improved their knowledge of hazardous materials. They can now identify such materials on the spot using the latest detection equipment.

## **Information and Telecommunications Sector**

17. December 19, Government Computer News — FCC investigates smart radios. A notice of proposed rule—making released Wednesday, December 17, by the Federal Communications Commission (FCC) seeks ideas on how to encourage use of smart radios, or wireless communications devices that are more flexible at using RF spectrum. FCC chairman Michael Powell said that smart radio technologies will become necessary. There is a shortage of spectrum for new wireless services, while much of the spectrum already allotted goes unused. "Because they can use different frequencies and modulation techniques, smart radios could also translate signals between different radio systems," Powell said. "In an emergency, firefighters from one jurisdiction could more effectively communicate with firefighters in another." Additional information about Order FCC 03–322 is available online: <a href="http://hraunfoss.fcc.gov/edocs-public/attachmatch/DOC-242312-A1.pdf">http://hraunfoss.fcc.gov/edocs-public/attachmatch/DOC-242312-A1.pdf</a>

## **General Sector**

- 18. December 21, Reuters Saboteurs attack Iraqi oil infrastructure. An explosion ignited fuel tanks in the Ur district of Baghdad in a pre—dawn attack Sunday, December 21. No casualties were reported but hundreds of thousands of litres of fuel were burned. An Iraqi Oil Ministry official said on Sunday a pipeline carrying oil products to a refinery in Baghdad was attacked on Friday in al—Mashahdah, some 20 miles north of Baghdad. The sabotage of oil products facilities comes at the height of a gasoline shortage crisis in the oil—rich country. Damaged pipelines and rundown refineries alongside smuggling have left authorities struggling to satisfy local fuel demands and Iraqis waiting in queues for hours to fill up their cars with petrol. Lack of basic services has fueled anti—American feeling among parts of the population despite the joy of most Iraqis after the December 13 capture of Saddam.

  Source: <a href="http://www.reuters.com/newsArticle.jhtml?type=worldNews&storyID=4028216">http://www.reuters.com/newsArticle.jhtml?type=worldNews&storyID=4028216</a>
- 19. December 20, Associated Press U.S. Navy busts drug boats in Arabian Sea. U.S. sailors seized an estimated \$3 million worth of heroin Saturday, December 20, as an Arab sailing crew in the northern Arabian Sea tossed the bags overboard. The seizure came a day after the U.S. Navy announced the December 15 confiscation of two tons of hashish believed tied to Osama bin Laden's terror network. That seizure, in the Persian Gulf, was considered by Western analysts to be some of the first hard evidence of al Qaeda links to drug smuggling. In a daybreak raid Saturday, sailors on a guided—missile cruiser USS Philippine Sea boarded two dhows, or traditional Arab sailing boats, and detained 21 crew members, according to a statement issued by the U.S. Navy 5th Fleet. The Australian, British, New Zealand and U.S. air forces had tracked the dhows for two days after receiving intelligence information gleaned from the December 15 seizure. Rear Admiral Jim Stavridis said in the statement that U.S. officials are "investigating potential al Qaeda connections to these operations."

20. December 19, U.S. Department of State — Travel Warning: Colombia. The Department of State warns U.S. citizens against travel to Colombia. Violence by narcoterrorist groups and other criminal elements continues to affect all parts of the country, urban and rural. Citizens of the United States and other countries continue to be the victims of threats, kidnappings, and other violence. This threat has increased recently in urban areas, including, but not limited to, Bogota, Cartagena, and Barranquilla. About 3,000 kidnapping incidents were reported throughout Colombia in 2002. Since the year 2000, 27 Americans were reported kidnapped in various parts of the country. American kidnap or murder victims have included journalists, missionaries, scientists, human rights workers, U.S. government employees and

businesspeople, as well as persons on tourism or family visits, and even small children. Most kidnappings of U.S. citizens in Colombia have been committed by terrorist groups, including the Revolutionary Armed Forces of Colombia (FARC) and the National Liberation Army (ELN), which have been designated as Foreign Terrorist Organizations by the Secretary of State. Since it is U.S. policy not to make concessions to, or strike deals with, terrorists, the U.S. Government's ability to assist kidnapped U.S. citizens is limited.

21. December 18, Associated Press — Bullet marks seen on Ohio school buses. Schools were closed Thursday and Friday at a district near several highway shootings after bullet marks were found on two school buses. Officials canceled classes on Thursday, a day after the marks were found near the taillights of the buses during maintenance inspections. The district, which serves about 20,500 students, used the day off to inspect all of its 200 buses and confer with a task force investigating the shootings, said R. Kirk Hamilton, superintendent of South—Western City Schools. No other bullet marks were found during the inspection, he said. Investigators have not said if the bullet marks are linked to 16 shootings along Interstate 270. One woman died in the attacks. A bus driver said that she heard a noise that may have been a gunshot and that two students may have been on board, said Steve Martin, the Franklin County sheriff's chief deputy.
